

For Immediate Release

Telrad Enables High Availability for Voice over WiMAX

Version 3.2 of the Commatch 6004 provides carrier-grade redundancy

Lod, Israel – August 20, 2007 - Telrad Networks, a developer of carrier-grade telecommunications equipment, announced the release of a dramatically improved hardware and software configuration for the Commatch 6004 SIP to v5.2 access gateway for voice over WiMAX networks. The newly released Version 3.2 includes full redundancy, enhancing reliability and eliminating the risk of disruption from a single point of failure.

"Our existing deployments have been tremendously successful," said Nir Gazit, Commatch Product Line Manager. "So the obvious next step was to eliminate downtime and provide carrier-grade availability."

For operators seeking to preserve the features of existing TDM switches while deploying voice over WiMAX networks, the field-proven Commatch 6004 provides an immediate solution without the need for a softswitch. The Commatch 6004 access gateway provides full voice services and provisioning to WiMAX VoIP customers via the existing legacy switch.

"Current WiMAX deployments have not yet reached the scale where you need a softswitch to provide voice services," said Gazit. "Operators want a quick and inexpensive solution that can be implemented in a matter of hours. The Commatch provides that solution, at a carrier grade level with no changes to the operator's network and at a tenth of the cost per user of a softswitch."

Telrad Networks will be showcasing the Commatch 6004 at the WiMAX India 2007, taking place August 24 in New Delhi.

ABOUT TELRAD NETWORKS LTD.: Telrad Networks has been developing carrier-grade communications equipment for more than half a century. Telrad provides development capabilities that focus on integration of core technologies into standardized, Tier-1 carrier-class products. Telrad is devoted to providing a highly flexible development team, allowing its partners and customers a high level of control in the development cycle and product roadmap. Telrad's Integrated Network Solutions Division provides professional support services and transition from traditional to next generation networks for operators in emerging markets. Telrad is a privately-owned company founded in 1951. For more information, visit www.telrad.com
